

AppDynamics Visibility Packs

AppDynamics connects everything in the infrastructure to the impact it has on your applications and customers, giving you application and business awareness across the stack.

Benefits of the AppDynamics Visibility Packs

Make Your Network and Infrastructure App-Aware: Get end-to-end visibility into customer-facing, revenue-generating, business critical applications running on the Cisco infrastructure.

- Understand the impact that network policies have on app performance in real-time.
- Have unified visibility across virtualized or hyper-converged environments.
- Optimize your infrastructure based on dynamic application needs.

Detect Issues Before They Impact Customers: Using contextual, correlated insight from across the stack, teams can quickly isolate fault domain when outages or slowdowns occur. This prevents IT alert storms, reduces mean-time-to-restore (MTTR), and upholds customer experience and brand reputation.

Correlate Application and Infrastructure Performance to Key Business Outcomes:

Get real-time insights into how application and infrastructure performance impact critical business metrics like revenue, conversion rates, and customer satisfaction. This gives teams immediate, clear, and actionable insights to proactively manage risks and business opportunities.

Migrate to the Cloud with Confidence: De-risk your move to the cloud. With the Visibility Pack, you'll be able to:

- Gain clarity into application architecture with flow maps that show every component and dependency across any environment, including SAP.
- Make accurate resource decisions by identifying key application resource needs to right-size cloud investments.
- Validate migration through visibility into technical and business metrics pre- and post-migration.

There's never been a better time to buy AppDynamics

Utilize 5 days jumpstart services support

Be up and running in a month

* Available in: US, Canada, EMEA, LATAM, Brazil, Australia, New Zealand, Singapore, Japan, India, HongKong, Fiji, South Korea, UAE, Saudi Arabia, Kuwait, Egypt, Qatar, South Africa, Israel, (CIS): Armenia, Belarus, Kazakhstan, Kyrgyzstan, Moldova, Russia, Tajikistan, Turkmenistan, Ukraine, and Uzbekistan. SaaS is not available in Russia and Saudi Arabia.

Undeniable Value: Cisco Infrastructure + AppDynamics Visibility Packs

The value of Cisco's core infrastructure solutions are undeniably enhanced with AppDynamics. Below are just a few examples of the challenges AppDynamics can help solve for your customers.

Challenge	The AppDynamics Solution
No visibility into how to optimize application performance across virtualized or hyperconverged environments in UCS or HyperFlex	Installing AppDynamics with UCS or HyperFlex gives teams an added layer of visibility and transparency into how business-critical applications are performing on top of the hyperconverged infrastructure. When issues occur, AppDynamics detects the root cause and avoids war room scenarios — ultimately driving better end user experiences and business outcomes.
No application context when troubleshooting network performance issues in ACI	When AppDynamics is installed with ACI, teams can easily identify which services are impacted due to the network and what infrastructure the services run on. This makes it easier — and faster — to troubleshoot issues, identify root cause, and fix the problem in the network.
Server capacity issues cause application slowdowns	Pairing AppDynamics with CWOM helps replace sizing guesswork with real-time analytics and modeling so that you know how much infrastructure is needed to allow your applications and business to keep pace with demand.
No holistic monitoring for transactions that involve SAP	Installing AppDynamics for SAP as part of an overall Cisco SAP solution provides a holistic view across the entire path of transactions and deep visibility, including code-level details, into SAP. This enables support teams to clearly identify whether the problem is inside or outside of SAP and enables efficient troubleshooting, root cause analysis, and fixing the problem.

Get Started with the AppDynamics Visibility Pack

Identify a Business-Critical

Application: Select a customer-facing or mission-critical application (including SAP) that drives business outcomes.

Partner with AppDynamics for Proof

of Value: Meet with AppDynamics experts to architect a solution that solves critical pain points for the business.

Deploy & Deliver Results:

See first-hand how the AppDynamics Visibility Packs provide a unified view that helps avoid unexpected downtime and improves business outcomes.

The world's largest and brightest companies run AppDynamics.
